Greetings from the Co-Chairmen

Welcome to the joint **2nd International Conference on Computational Methods in Structural Dynamics and Earthquake Engineering—COMPDYN 2009** and the **2nd South-East European Conference on Computational Mechanics—SEECCM 2009** on the island of Rhodes.

COMPDYN 2009, one of the thematic Conferences of the European Community on Computational Methods in Applied Sciences (**ECCOMAS**), is a Special Interest Conference of the International Association for Computational Mechanics (**IACM**) and has been promoted by the European Committee on Computational Solid and Structural Mechanics (ECCSM) of ECCOMAS. The purpose of the Conference is to bring together the scientific communities of Computational Mechanics, Structural Dynamics and Earthquake Engineering in an effort to facilitate the exchange of ideas in topics of mutual interests and to serve as a platform for establishing links between research groups with complementary activities. The communities of Structural Dynamics and Earthquake Engineering will benefit from this interaction, acquainting them with advanced computational methods and software tools which can highly assist in tackling complex problems in dynamic/seismic analysis and design, while also giving the Computational Mechanics community the opportunity to become more familiar with very important application areas of great social interest. The COMPDYN 2009 Conference is supported by the National Technical University of Athens, the European Association for Structural Dynamics (EASD), the European Association for Earthquake Engineering (EAEE), the Greek Association for Computational Mechanics (GRACM) and the John Argyris Foundation.

SEECCM 2009 is a Special Interest Conference of ECCOMAS and IACM. Following the growing success of International and National Conferences on Computational Mechanics worldwide, the National Associations of Computational Mechanics of the South-East European countries decided to launch an initiative for the organization of South-East European Conferences every three years. The first conference in this series was held in Kragujevac, Serbia in 2006. The purpose of the Conference is to promote achievements in Computational Mechanics in the South-East European Region by encouraging research and development among young researchers, stimulating education in universities and disseminating modern trends amongst scientists and engineers in the growing field of Simulation-Based Engineering Sciences. The SEECCM 2009 Conference is supported by the National Technical University of Athens, the University of Kragujevac, Serbia, the Greek Association for Computational Mechanics (GRACM), the Serbian

Association for Computational Mechanics and the John Argyris Foundation.

Welcome to the “sun island” of Rhodes, situated at the crossroads of two major sea routes of the Mediterranean and the meeting point of three continents, which has been inhabited since about 4000 BC and during its long and rich history has experienced different identities, cultures, architectures and languages. Rhodes has been famous since antiquity as the city of the Colossus of Rhodes, one of the Seven Wonders of the Ancient World, and the citadel of Rhodes, built by the Knights Hospitaller, which is one of the best preserved medieval towns in Europe and was designated as a UNESCO World Heritage Site in 1988.

The organizers would like to thank the authors for submitting their contributions and for their respect of the deadlines. Special thanks go to the 50 colleagues who contributed to the organization of the Minisymposia and to the Referees who, with their work, contributed to the scientific quality of the conferences. We want to express our gratitude to all of them and in particular, we want to thank the students of the Institute of Structural Analysis and Seismic Research at the NTUA for providing assistance in the lecture rooms.

The subject of the conference and the idyllic location offer a perfect blend for scientific endeavor and recreation. Thus, we invite you to enjoy the joint Conferences and the Island of Rhodes and to experience an unforgettable event.
